

# Project: BP Modify Member Directory/Header Plugin

Wbcom Designs is building a plugin namely: **BP Modify Member Directory/Header** which will add an extended feature to the big name: “**BuddyPress**” that will allow any Admin to select different profile fields on members loop page and member header cover image.

## Functionality

### Buddypress

We'll install and configure BuddyPress for a social network. Users will be able to register for an account on the site.

Once their account is registered and activated, they'll be able to view their own and other users account. They will be able to see their profile data on members loop page and single member page.

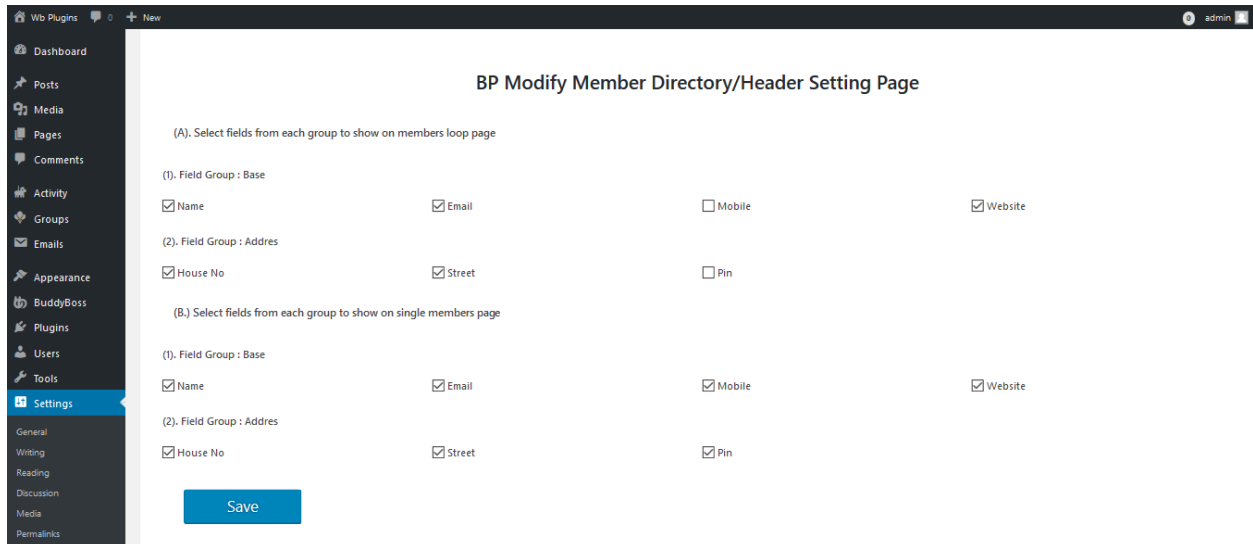

### Basic Functionality:

Basic functionality of this plugin to add option for admin to select which xprofile fields will be displayed inside member loop and on member's profile header i.e. this plugins extends members loop and single member page to show additional information taken from xprofile data

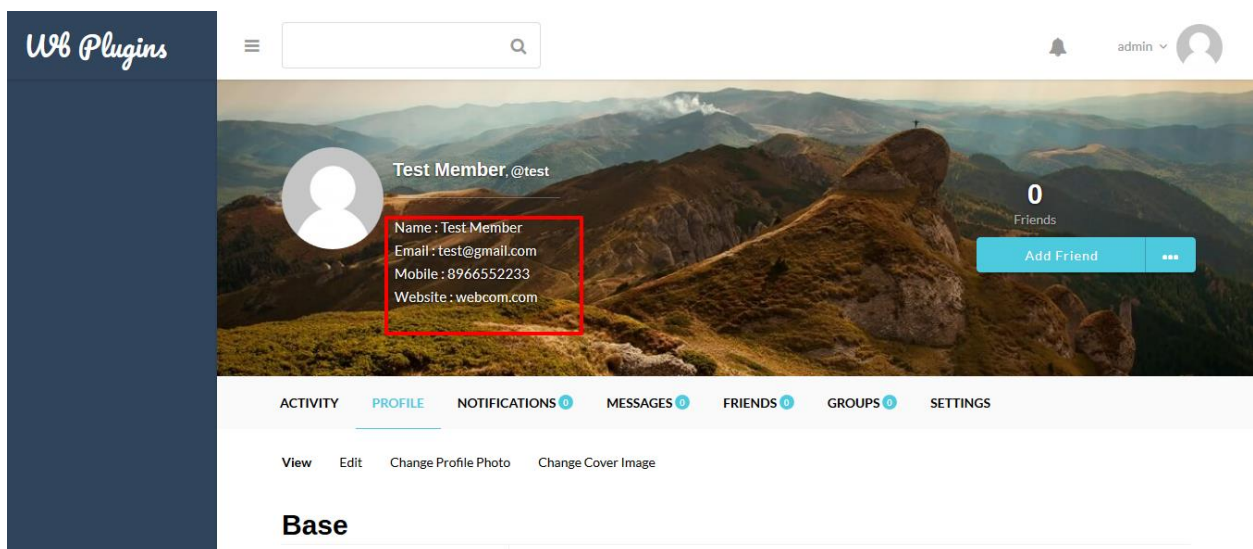

As you can see in this [wireframe](#).

Also following screenshots explains the working of this plugin.

## 1. Admin setting page : BP Modify Member Directory/Header Setting Page

## 2. Display XProfile data on single member's header

### 3. Display XProfile data on member's loop page

The screenshot shows a WordPress member loop page. On the left is a dark blue sidebar with the text "Wb Plugins". The main content area has a header with a search bar and a notification bell. Below the header is a tab labeled "ALL MEMBERS" with a count of 2. The member list contains two entries: "admin" and "Test Member". A red box highlights the XProfile data for both members, which includes Name, Email, Website, House No, and Street. Below the "Test Member" entry is an "Add Friend" button. At the bottom, it says "Viewing 1 - 2 of 2 active members".

**Wb Plugins**
